Notes:
1. The following GoodRelations elements are not shown in this diagram because they are only shortcuts for simpler annotation or querying. See the documentation at http://purl.org/goodrelations/ for details:
   - gr:hasMinValue (shortcut for querying hasMinValueFloat and hasMinValueInteger properties in one turn)
   - gr:hasMaxValue (shortcut for querying hasMaxValueFloat and hasMaxValueInteger properties in one turn)
   - gr:hasValueFloat (shortcut for setting both hasMinValueInteger and hasMaxValueInteger properties to the same value in one turn)
2. For the recommended cardinality of attributes, see the GoodRelations Language Reference at http://purl.org/goodrelations/ v1.html.
